5a) Location of manufacturing facility several w/in 500 miles

6) Are you ISO certified? Yes or  No

WATERPROOFING AND BASEMENT PRODUCTS

May 2, 2008

Dear Vendor:

As the green building sector grows, more and more building professionals, owners, and operators are seeing the benefits of green building and LEED certification.

LEED stands for "Leadership in Energy and Environmental Design" and is a rating system developed by the U.S. Green Building Council to provide standards for the design, construction and operation of buildings.

For a building to become LEED certified, it must meet certain prerequisites and credit requirements. These points are awarded for green aspects integrated into the building in six categories. Individual products cannot be LEED certified, but rather contribute to the overall LEED points obtained on a given project.

Mar-flex has received many requests for information on our products to see if using our products could assist them in obtaining these points.

In response to these requests, Mar-flex is in the process of compiling information to help us ascertain what areas Mar-flex products might qualify for.

On the following page please provide the information to the questions which will assist us in this process and either fax it back to Mar-flex at (513) 422-7282 attention Michelle or e-mail to [mark@mar-flex.com](mailto:mark@mar-flex.com).

Thank you in advance for your cooperation.

Sincerely,

Brett Oakley  
President
